SUPPLY SYSTEM

TriVolt Industries is an established manufacturer of electrical heating elements, sensors and control panels. Located in Montreal Canada, it boasts a 35 000 square foot state of the art facility. In a conscious effort to continuously provide quality, service and cost-effective solutions, TriVolt now offers its supply system to all customers.

Over the past 15 years, TriVolt Industries has catered mostly to OEM accounts and has performed several pilot tests of the supply system. The supply system allows OEM to carry less inventory, schedule yearly production and reduce costs while assuring product availability. Customers benefit from a fixed long term price contract as part of the program. TriVolt will stock all finished goods and stock levels can be adjusted at no extra cost.

Partnered with UPS Solutions and Traffic-Tech, TriVolt industries provides on-time delivery of all goods to both Canadian and American customers. U.S. shipments are sent from the Champlain New York warehouse, eliminating brokerage fees and international freight charges.

See opposite page for the list of products available in our supply system.
